PROFESSIONAL SUMMARY

Bilingual (English/German) Computer Science professional specializing in technical solution engineering, AI integrations, and cross-functional collaboration. Proven track record of bridging the gap between complex technical architectures and end-user functionality, demonstrated by scaling web interfaces for 3+ million users and deploying high-impact API integrations. Adept at translating technical requirements, diagnosing complex data issues, and designing intuitive solutions for enterprise environments.

EDUCATION

Texas Tech University

Exp. graduation May 2027

B.S. in Computer Science

Lubbock, TX

- GPA: 3.88/4.00, President's Honor List, CodePath, Web3 Acceleration Association
- Related Coursework: Data Structures & Algorithms, Linear Algebra, Computational Thinking Data Science, Object-Oriented Programming, Computer Architecture and Design of Algorithms

SKILLS

- **Languages:** English (native/bilingual), German (native/bilingual), Spanish (working proficiency)
- **Programming:** Python, Java, C++, C, JavaScript, SQL,
- **Cloud & Integration:** Claude, AWS, GitLab, GitHub, MySQL, JSON, HTTP Requests, Figma, Adobe XD, Antigravity
- **Frameworks:** React, NumPy, Pandas, Streamlit, Hugging Face, Matplotlib, Flask, Node.js, TypeScript

EXPERIENCE

AI Upskilling Certificate: Technical Foundations

Sep 2026

Qualcomm Academy

Online

- Completed comprehensive 5-course training on hybrid and Edge AI architectures, focusing on model distilling, cloud data preprocessing, and generative AI solutions.

Power Asset Data Optimization Intern

May 2026 — Aug 2026

ProPetro Services, Inc. (PROPWR)

Midland, TX

- Built a low-code data pipeline (Power Automate + AI Builder) that automates ingestion and parsing of vendor equipment-health reports, turning unstructured PDF data into structured records for operational decision-making
- Applied Python (PyMuPDF) to analyze patterns across 100+ source documents, informing the schema design behind an AI/ML-driven document extraction model with 95% accuracy on 90+ reports/week
- Designed a Power BI dashboard consolidating 400+ asset fluid-analysis reports into a single view, giving operations leadership fast visibility into critical equipment status across a \$100M+ asset fleet
- Quantified \$31,000+/year in labor savings by replacing manual report review with automated data collection — a pipeline built to scale as the company's asset base and reporting volume grow

Lung Cancer AI Research Platform — AI Engineer

Jan 2026 — Present

Texas Tech University

Lubbock, TX

- Architected and shipped a multi-agent clinical reasoning system orchestrating 3 LLMs (Gemini, Qwen, DeepSeek) in a proposer/critic/judge loop with 8 tool-call capabilities — including RAG search, PubMed retrieval, drug-interaction checks via OpenFDA, and ontology-grounded fact verification — reducing hallucination in high-stakes medical Q&A.
- Built the full-stack web platform (React 19 / Vite, MongoDB, JWT auth, Vercel serverless) with conversation persistence, patient management, knowledge-base browsing, and a D3.js interactive knowledge graph visualizing 1,000+ ontology/chunk/source relationships.

UX Design Apprentice

Aug 2019 — July 2023

Swiss Federal Railways

Bern, Switzerland

- Designed and optimized scalable web interfaces for Switzerland's premier travel application, directly impacting a user base of over 3 million individuals.
- Collaborated cross-functionally with software engineering and product management teams to ship an internal data-gathering dashboard, increasing utilization by 600%.
- Owned the end-to-end solution design of a Microsoft PowerApps scheduling tool, streamlining enterprise resource sharing and reducing operational costs by \$30,000.
